Overview

- Hot temperatures experienced over the weekend are on the downward trend - should be back to near seasonal averages by Tue/Wed.
 - This is due to the strong ridge starting to shift eastward into the Great Basin, increased cloudiness and moisture from the remnants of Tropical Storm Lidia, and the return of onshore flow.
- Smoke from all the wildfire activity will continue to cause poor air quality and periods of poor visibility through mid-week
- Chances for afternoon/evening mountain showers and thunderstorms through mid-week, especially along the Sierra.
 - Strong gusty winds, frequent lightning, and localized heavy rain are possible with any thunderstorms.

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

High Risk of Significant Fire Potential developing due to anticipated thunderstorms this week. Much cooler by the end of the week. The remnants of once Tropical Storm Lidia are spreading across Northern California. Today some showers or a few lightning storms are expected to develop, although the timing and locations for that still remain a bit uncertain. Any lightning over the next few days will definitely stand a good chance of starting new fires, so High Risk conditions have been issued for the times and areas that seem most likely to have a chance of that. Nocturnal shower or thunderstorm activity is also expected Tuesday. Later this week temperatures will be much cooler and relative humidity (RH) should increase quite a bit, enough to make fuels conditions a little less severe.

Also by the end of this week a low pressure trough will become established along the coast to bring seasonable temperatures back to the region. There may also be some areas of showers or a few wet thunderstorms, mainly over the northern mountains. By the end of next weekend, the southern portion of that trough may be lingering along the central California coast with high pressure returning to the northern areas. This could move some shower or thunderstorm activity to our southern areas at that time.

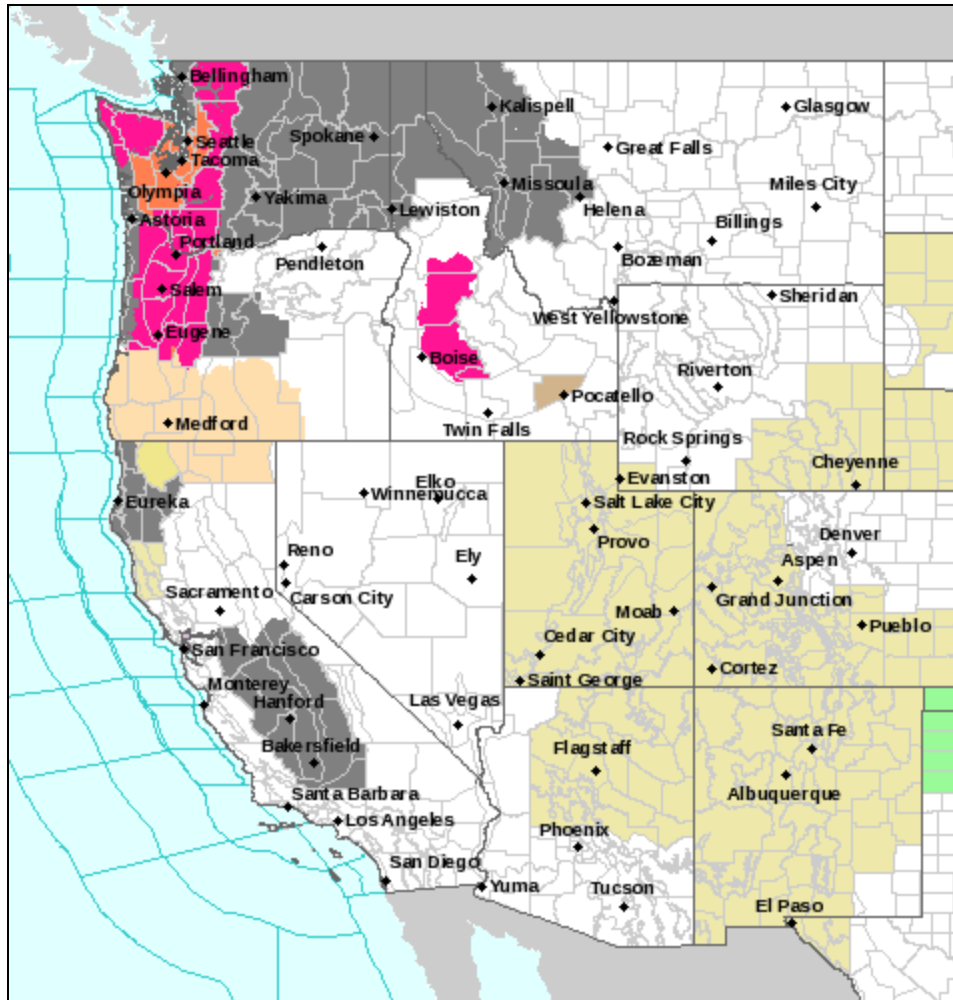

Overall relatively poor smoke dispersion with poor air quality in canyons and valleys near and downwind of active fires will continue in spite of the more active weather pattern this week, but there should still be some significant improvement for many areas. The marine layer will likely be rather shallow, but will return to the coast over the next few days.

SOUTHERN CALIFORNIA

Humid conditions will be found over many areas of Southern California below 3,000 feet for the next several days due to lingering low level moisture from Lidia. But the established cooling trend will continue today as temperatures return to within a few degrees of normal. Afternoon temperatures are expected to range from the 70s at the coast to the upper 80s to lower 90s in the valleys to 108 in the low desert today and Wednesday. Scattered afternoon wet thunderstorms will develop along the Sierras north of Kern County eastward into Mono County and the Inyo National Forest. Wednesday and Thursday, low level flow will turn a bit more southerly which may import some monsoonal moisture into Southern California, and as a result, isolated wet thunderstorms will be possible on the San Bernardino and Cleveland National Forest. Further north, look for decreasing thunderstorm activity through the week as a trough approaches from the west. Only a handful of storms are expected in the Sierras by Wednesday and Thursday. However, over Southern California, storms will become more numerous over the weekend, especially in the desert areas. Temperatures will climb a bit later this week with widespread 90s returning to the valleys, but a return of the extreme heat of last week is not expected through the period. Winds will remain light, except during the passage of thunderstorms.
